SUBMERSIBLE PUMP - 1/2 HP - TRASH PUMP

Product # **290784** | Model # **SV400-115**

- Equipped with Vortex impellers, undoubtedly the best non-clog impellers ever invented for the handling of mud, raw sewage, viscous liquids, rags, wood chips and other solids. They pass solid up to 90% of pump outlet diameter
- Longer power cord – standard 33' power cord
- 304 Stainless Steel motor housing – superior abrasion resistance will not wear out like aluminum motor housings when pumping sandy water
- Three seal motor protection - motor is protected by double mechanical seals. Lower seal made of silicon carbide and upper seal is made of carbon/ceramic. An additional lip seal has been installed above the impeller, to help prevent abrasives such as dirt, silt or sand, from entering into the seal chamber
- More motor protection – winding protection and (NEMA) Class F motor insulation allows motor temperature to raise to 230°F, superior to pumps with Class A and B insulation. Automatic switch turns pump motor off if temperature and/or amp draw raises too high. When the motor cools the switch will automatically reset and the pump will turn back on
