KnitActiv™ | TRGSS

Maximum heat protection with strategic silicone-striped palms for handling hot parts plus extended cuffs

ANSI 5 HEAT TAA COMPLIANT

ABOUT THE PRODUCT

Our KnitActiv™ TRGSS gloves offer maximum heat protection with silicone stripes on the palm for grip and comfort when handling hot parts plus extended cuffs for wrist and forearm protection. Made with cotton, they've been internally tested for protection beyond maximum ANSI 5 standards for extreme heat resistance up to 752°F / 400°C. Strategically placed palm stripes increase grip and allow air channeling for additional heat resistance. They feature 6-inch knit cuffs for extra wrist and forearm protection from heat hazards.
