#S13SXFCNT

Superior Touch®

Fully Nitrile-Coated Glove made with HPPE

#S13SXFCNT

Superior Touch® gloves made with HPPE feature a full nitrile coating, for complete protection from oils and solvents. Nitrile rubber is a co-polymer of acrylonitrile and butadiene, offering excellent resistance to punctures, cuts, snags, and abrasion, and although not flame-resistant, demonstrates functional performance in temperatures ranging from -4 -149°C (25-300°F). Nitrile has considerable resistance to oils, fuels, and certain organic solvents. Our string-knit glove is made with HPPE, which is fifteen times stronger than steel on an equal-weight basis, and is a lint-free, continuous-filament yarn. Gloves scored an ASTM cut-level 2 / CE 3 rating, with excellent abrasion resistance as well. And, because the entire glove is silicone free, they are an excellent choice for automotive workers. They are also suitable for workers handling sharp steel, glass or circuit boards, especially when lint and particulate contamination is a concern. Snug knit wrist keeps gloves in place, and blue nitrile coating makes gloves fully oil resistant.

These gloves were designed with silicone-free materials to eliminate risk of contamination of any paintline parts.

ASTM ANSI PUNCTURE 4 | ASTM ANSI ABRASION 4 | ASTM ANSI CUT LEVEL 2 | CE | EN388 4342

650 grams of cut protection.

FEATURES

- Great protection from sharp materials and machinery
- Full palm nitrile coating protects against oils and solvents
- Excellent abrasion, puncture and tear resistance
- Completely silicone-free, making them a great choice for automotive assembly
- Dimethylformamide (DMF) and lint free
- High dexterity and flexibility, glove features snug knit wrists for all-day comfort

APPLICATIONS

Sharp Steel
Petrochemical
Glass
Aerospace Industry
